

EURAQUA UK

Unbeatable Water Treatment Service

NEW PRODUCT FILTER-AG+

We were pleased to offer Filter-AG+ as an alternative turbidity filter to multi media in our new price list. Substantial savings can be made using Filter-AG+ systems due to its low pressure drop and high service flow rates allowing downsizing of equipment (compared to multi media). Not only is it cheaper but produces better water quality, reducing suspended solids to 5 micron or below. Please find attached the Filter-AG+ page with the new prices for your records.

Any order of 10 or more (40 to a pallet) can be offered with a 10% discount.

Technical Details of Filter-AG+

Conditions for operation:-

- Water PH: Wide range
- Max Temp: 140°F/60°C
- Bed depth: 24-36 inches
- Backwash flow rate: 15-20 gpm/sq.ft.
- Service flow rate: 12-20 gpm/sq.ft.
- A gravel support bed is required

Physical Data:-

- Colour: light tan to near white
- Particle Size 0.5 mm
- Dry Bulk Density 50lbs/cu.ft
